Until recently I had been making do with Apple's Organizer (Aperture) creating my raw and jpeg files, managing those with Lightroom, and processing selected files via Photoshop. I've always looked at Lightroom as a simple library from which to choose your photographs and then a stepping stone to Photoshop. Along the way I had found the program functional but seriously lacking in the Pro features I needed. If you don't use or care for the native software image editors, Lightroom might just be perfect for you. Everyone is different, so if you're a Lightroom beginner, you'd be forgiven for thinking it's just going to be a picture-viewing program, but in reality it's much more complex than that.
